PUNE INSTITUTE OF COMPUTER TECHNOLOGY, PUNE - 411043

Department of Electronics & Telecommunication Engineering (E&TCE)

INNOVATIVE TEACHING – LEARNING (ITL)

QUIZ – 1: WORD MAZE

CLASS: SY (E&TCE) (AY: 2025-26, SEM-II) **COURSE: DIGITAL CIRCUITS DESIGN (DCD)**

DAY AND DATE:_____

NAME OF STUDENT:_____**ROLL NO:**_____**DIV:** _____

Refer to the hints (1 to 25) given at the end of the table and find the corresponding words in the maze.

E	N	B	W	V	L	U	I	N	Z	R	D	I	N	P	U	T	A	V	D
I	N	V	E	R	T	E	R	A	M	W	O	D	D	B	L	A	T	C	H

INNOVATIVE TEACHING – LEARNING (ITL)

QUIZ – 1: WORD MAZE

Hints to mark the words in the Maze:

1. An equation showing each output in the circuit as a function of the inputs
2. Gate that compliments output
3. Pictogram used to represent various electrical and electronic devices or functions
4. The signals or data received by the system
5. The signals or data sent from system
6. Circuit whose output at any time only depends on the present combination values of inputs
7. A tabular representation of all the combinations of values for inputs and their corresponding outputs
8. A scheme of numbers that only has two possible values for each digit: 0 and 1.
9. Digital logic gate that gives an output of 0 when any of its inputs are 1, otherwise 1
10. A digital combination logic circuit that performs the logical inverse of an and gate
11. Circuit that has two stable states and can be used to store state information.
12. Sequential circuits require_____.
13. A sequence of binary number systems, which is also known as reflected binary code.
14. A variable or the complement of a variable
15. Condition wherein a counter gets onto a forbidden state and rather than coming out of it to another acceptable state or initial state, the counter moves from one unused state to another unused state and the counter may never come to valid state. So, the counter becomes useless.
16. A circuit where the signal must be one of two discrete levels.
17. A type of counter composed of flip-flops connected into a shift register, with the output of the last flip-flop fed to the input of the first, making a "circular" or "ring" structure.
18. A finite state machine in which the next state is decided by the current state and current input symbol.
19. A finite-state machine whose output values are determined both by its current state and the current inputs.
20. Condition in which if the input is changed to any other condition, then the output of flipflop becomes unpredictable.

INNOVATIVE TEACHING – LEARNING (ITL)

QUIZ – 1: WORD MAZE

21 ---------- triggered event means that when the voltage reaches a particular level, the event is triggered

22. To switch between two different options for (something, such as a computer setting) usually by pressing a single button or a simple key combination

23. Process for converting decimal numbers into their binary equivalents.

24. A sequential counter similar to a ring counter

25. Type of triggering in which the output changes when the signal transits from a high level to a low level or from a low level to a high level.
